

**COLIN CONSTRUCTION COMPANY**

DESIGN **BUILD** FOR HEALTHCARE

**THE CLIENT SAID...**

## **San Francisco General Hospital (SFGH)**

### **San Francisco, CA**

**DELIVERY METHOD: Design Build**

**COMPLETION DATE: 2009 August**

A seven-phase, multi-million-dollar project that remodeled SFGH's Radiology Department. This complex project addressed the hospital's aging infrastructure and services. The final design allowed SFGH to add an additional MRI and Interventional Radiography Room to its list of modalities. We addressed asbestos, fire-rating deficiencies, HVAC, and electrical code issues along the way and corrected them. The post-tension concrete slab presented numerous challenges with loading and equipment anchorage. Phase seven added an additional 30 tons of chilled water capacity for the hospital. This additional chilled water took care of some of our project demands and also gave the hospital future expansion capabilities. All seven phases were completed without elimination of any hospital services.

#### **Highlights**

- A seven-phase, multi-million-dollar project that remodeled SFGH's Radiology Department. This complex project addressed the hospital's aging infrastructure and services. The final design allowed SFGH to add an additional MRI and Interventional Radiography Room to its list of modalities. We addressed asbestos, fire-rating deficiencies, HVAC, and electrical code issues along the way and corrected them. The post-tension concrete slab presented numerous challenges with loading and equipment anchorage. Phase seven
- Added MRI and Interventional Radiography Room.
- Elevated the standard of care in diagnostic imaging for San Francisco residents.
